## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 8-10 and 15 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Munro (US Patent No. 7,202,941). Munro discloses transmitting at least one laser signal toward a target and receiving at least a portion of the transmitted signal back from the target. One phase computing algorithm that can be used in place of a DFT by the digital processor of the system is the use of non-linear regression curve fitting for estimating the received sinusoid's amplitude, offset, frequency and phase. The frequency is known, thus simplifying (i.e. optimizing) the non-linear regression. See column 42, lines 45-53.

***Allowable Subject Matter***

Claims 1-7 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The processing of a specific type of signal, e.g. optical coherence tomography (OCT), using digital data points that represent only a small portion of a larger signal within the time domain utilizing non-linear regression with a sinusoidal model reads over the prior art of record.

Claims 11-14 and 16-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
